

PROFILE

Lead product designer with 14 years of experience crafting SaaS, enterprise and consumer products, including seven years across Jira and Confluence at Atlassian. I turn complex workflows into intuitive experiences, with recent work in AI-native and agentic product design. Proven at driving alignment, influencing roadmaps and shipping quality at scale.

SKILLS

Product design	Research & strategy	Strategic leadership	Tooling
End-to-end UX and product design	User research & testing	Setting cross-team vision	Figma, Replit, Lovable,
Visual craft and design language	Journey and conceptual modelling	Stakeholder alignment	Cursor, GitHub Copilot,
AI-assisted design and prototyping	Information architecture	Facilitation and design critique	Vercel, VS Code,
Design systems and governance	Success metrics, qualitative and quantitative	Coaching and mentorship	Sketch, Axure, Adobe suite, Dovetail, User interviews, Html/CSS,
	Accessibility and WCAG	Roadmap prioritisation & experimentation	Swift, Xcode

EXPERIENCE

Macquarie Group

Jul 2026 - Present

- Lead the information architecture redesign for the Macquarie Banking iOS app as part of the scalable banking initiative, starting with a Phase 0 consolidation of profile settings, the More tab and scattered controls.
- Built an AI-assisted prototyping tool that lets other designers create working Swift app prototypes, so teams can test flows natively on iOS instead of in static mocks.

Atlassian

Mar 2019 - Apr 2026

Work item view

Jun 2024 - Apr 2026

- Built the first vibe-coded product template, which let 2,000+ employees ship production-ready prototypes with AI tools. Showcased at AI Builders Week and recognised by Atlassian President Anu Bharadwaj.
- AI and accessibility champion across Atlassian, coaching hundreds of colleagues in accessibility standards and AI-assisted design workflows.
- Drove concept testing and discovery for next-generation AI driven work item experiences, that provided actionable insights and shaped the product direction.
- Developed a density-spectrum framework for AI responses across five information states and mapped every AI entry point across the work item, giving teams one pattern to build against.
- Led Saved Views, a surface that lets admins create and save multiple views for their teams, and exceeded adoption targets. Stepped in as acting PM for several months to write specs and unblock engineering.

- Established and led the development of the Jira UI Kit, a shared Figma library and design system resource, enhancing product quality and accelerating design workflows of makers. Used by 113 teams with 2.9M component inserts.
- Set the vision for Milestones, securing executive buy-in and aligning six cross-functional teams on one platform roadmap despite early organisational scepticism.

Jira Work Management

May 2022 - Jun 2024

Jira Work Management (JWM) at the time was one of Atlassian's fastest growing products ever, with the aim to make Jira more lovable, achieving 1M MAU in 2 years & \$100M ARR in 3 years.

- Led the redesign of customisable navigation for business projects, taking a vision-first approach where tabs and saved views were designed together, then phased and adapted through customer feedback. Over 50,000 users now land directly on their desired view, and the pattern was later adopted across software projects in the global navigation rollout.
- Led design on Approvals, a cross-cutting workflow feature that grew premium users from 0 to 23,000 and MRR from \$0 to \$185k. The experience has since extended to software projects.
- Led design on Overviews, which aggregates issues across business projects into one view, with 7,834 active users across 4,173 customers.

Data Center

Mar 2019 - May 2022

- Lead designer on Confluence and Jira Service Management Data Center, covering web and mobile for admins and end users, including user management, permissions and settings. Part of product leadership informing the future direction and roadmap of the products.
- Led a cross-product initiative to fix performance and scale problems with third-party apps and integrations, turning complex platform workflows into clear admin experiences.
- Ran design critique across Data Center products, lifting engagement scores from 3 to 4.5 out of 5.
- Drove visual vision piece to assist with establishing future strategic direction of Bitbucket DC.

ING Australia

May 2016 - Dec 2018

- Lead designer on a multi-million dollar overhaul of the mortgage broker portal, streamlining complex financial onboarding and reducing application processing time.
- Lead mobile designer across iOS and Android, maintaining a 4+ app store rating and delivering card PIN change, card replacement and reissue.
- Selected as one of 10 Design Leads from 2,355 global applicants in ING's innovation bootcamp, finishing top 6 of 350 ideas.

Suncorp Group

Aug 2012 - May 2016

- Led design and UI development of a strategic intelligence system for risk identification, nominated for a Compass Award for Project Excellence and Leadership. Earlier work included A/B tested quote flows and responsive business insurance apps.

EDUCATION

Master of Commerce (Extension) | University of New South Wales

Majors in Finance and Information Systems

Bachelor of Economics | University of Sydney

Majors in Economics and International Business
